

Histogram Panel & Data Brush

The histogram panel allows you visualize properties within your graph, and create filters on the fly by selecting sections of the chart.

For instance...

This histogram is looking at the **degree** (point:degree) property of all the data within our graph.

Our histogram creates a representation of our graph, broken down into bins.

Things to try:

- *Hover* over the bins to see the nodes or edges highlighted in the graph.
- Click on a bin to create a filter from it
